1. Background

The Outside Responder is responsible for dealing with any accidents or illness occurring outside the vaccine centre, but still on the Racecourse site, to deliver first aid and assessment.

2. Process

- At the start of each session, an Outside Responder will be identified. This person will be an experienced nurse or doctor who is acting in the role of Vaccinator / Consenter for the session.
- The Outside Responder will be posted in POD 7 close to the main entrance, which will also contain the Outside Responder Box during session times. The box will be stored in the resuscitation area outside of session times.
- The Marshals are advised of this process verbally in each daily briefing. It is also noted in the Marshal's prompt notes and there is a sign on the outside of the pod which hosts the responder box and Outside Responder.
- A Marshal will be allocated each shift to support the Outside Responder when called out of the Vaccination Hall
- The Outside Responder will be identified on the Duty Resuscitation Laminate on the flipchart by the Clinical & Pharmacy Lead Desk

3. Outside Responder Box Contents

| OUTSIDE RESPONDER BOX CONTENTS |
|--|
